Aeva Health

Mission

Connecting the dots of health. Transforming chronic illness in women.

Science / Technology / Innovation

Aeva Health combines integrative lifestyle medicine with a proprietary algorithm that unifies wearable data, test results, symptoms, cycle tracking, and more, across six health pillars. This enables personalised, real-time health plans — designed specifically to support women with chronic conditions.

Current Focus

Launching the Aeva app in February 2026 with beta testers. Current focus on refining predictive insights and improving pattern recognition.

Opportunities

Recruiting passionate founding team members, particularly individuals with lived experience of chronic health conditions. Opportunities include: Medical Research Intern, Content Writer, Social Media Intern, Community Manager, Partnerships Intern

Website: www.aevahealth.com

Allie

Mission

To better support and educate women using hormonal birth control by providing credible, accessible information that empowers informed healthcare conversations and healthier lives.

Science / Technology / Innovation

AAllie is an AI-powered mobile app designed to support women across all forms of hormonal contraception, offering education, personalised insights, and symptom tracking.

Current Focus

Rolling out the second wave of beta users, now supporting all methods of hormonal birth control.

Opportunities

- Social Media Intern (paid, part-time)
- Medical Content Creator Intern (paid, part-time)

Instagram: @theallieapp

INTER-UNI FEMTECH NETWORKING FAIR

The Amilis logo, consisting of the word "amilis" in a white, lowercase, sans-serif font, centered within a solid purple rounded square.

amilis

Amilis

Mission

AI-powered clinical platform designed for independent reproductive health specialists

Science / Technology / Innovation

Amilis develops an AI-powered clinical platform which structures fragmented clinical data, supports AI-driven diagnostics (including early detection of conditions such as endometriosis), and generates real-world evidence to accelerate research and drug development.

Current Focus

- Scaling AmilisMD across the UK and Europe
- Advancing AI diagnostics using pelvic imaging and hormonal data
- Expanding clinical, laboratory, and academic partnerships
- Building data foundations for research into endometriosis, PCOS, fertility, and ovarian health

Opportunities

Internships, graduate roles, research collaborations, and informal career conversations across AI, data science, product, engineering, and clinical research.

Website: <https://www.amilis.co.uk/>

Asan Cup

Mission

Making menstrual care easy, safe, and accessible for all, while eliminating period poverty and reducing stigma worldwide.

Science / Technology / Innovation

Developed at the Harvard Innovation Lab, the Asan Menstrual Cup is engineered from Class VI medical-grade silicone for comfort, safety, and ease of use. Its unique ring-stem design improves usability, particularly for first-time users. Each cup is reusable for up to 10 years, significantly reducing environmental impact.

Current Focus

Scaling global distribution, expanding social impact through a 1-for-1 donation programme, and measuring environmental and social outcomes.

Opportunities

Engagement across social impact, education, sustainability, and global health initiatives.

Website: <https://asancup.com/>

balance
the menopause support app

Balance

Mission

A free app helping women understand and navigate their hormonal health needs.

Science / Technology / Innovation

The Balance app delivers accessible, evidence-based hormonal health education and digital support, founded by menopause specialist Dr Louise Newson.

Current Focus

Expanding app usage and supporting women's hormonal health through digital tools, education, and community engagement. Additional resources are available through Dr Louise Newson's platforms, including podcasts, social media, and live events.

Opportunities

Academic and scientific research engagements, placements, and internships aligned with women's hormonal health and digital health innovation.

Website: <https://www.balance-app.com>

**booby
biome**

Booby Biome

Mission

Giving every baby the foundation for lifelong health, through research-backed microbiome solutions.

Science / Technology / Innovation

BoobyBiome translates breast milk microbiome research into practical health solutions, developing technologies that preserve beneficial bacteria in expressed milk and support infant gut and immune development through live microbiome products.

Current Focus

- Advancing and commercialising two flagship products: a microbiome-preserving device for breast milk storage and a live microbiome supplement.
- Scaling R&D and preparing for market launches following successful funding rounds, including recent seed and grant investments.

Opportunities

BoobyBiome seeks passionate collaborators and early-career talent interested in microbiome science, biotech R&D, clinical research, and product innovation.

Calla Lily Clinical Care

Mission

Developing innovative intravaginal drug-delivery solutions to improve fertility, pregnancy outcomes, and women's health.

Science / Technology / Innovation

Calla Lily's proprietary Callavid® platform is an intravaginal drug-delivery technology supporting targeted therapies in fertility, pregnancy, menopause, oncology, and live biotherapeutics, while reducing antibiotic use and antimicrobial resistance. The platform builds on technology named a TIME Best Invention of the Year,

Current Focus

The company will announce its first strategic collaboration with Merck KGaA in February 2026.

Opportunities

Engagement with biomedical scientists, engineers, quality and regulatory professionals, and research collaborators across women's health and drug-device innovation.

Website: <https://callalilyclinicalcare.com>

Costello Medical

Mission

Building trusted partnerships across the healthcare sector by delivering exceptional, high-quality services that improve patient outcomes and access to innovation.

Science / Technology / Innovation

Costello Medical's MedTech team works across Medical Communications, Evidence Development, and Value & Access to support medical device, diagnostic, imaging, and digital health technologies. The team develops scientifically robust strategies to support reimbursement, market access, and adoption.

Current Focus

Expanding MedTech client work while maintaining exceptional quality and supporting patient access to effective technologies.

Opportunities

Entry-level roles for undergraduates, postgraduates, PhDs, post-docs, and recent graduates. Analysts work across multiple projects, analysing clinical data and developing impactful materials for medical technology manufacturers.

INTER-UNI FEMTECH NETWORKING FAIR

DLRC

Mission

Supporting life science developers on their journey to success, ensuring patients can access the healthcare products they need.

Science / Technology / Innovation

DLRC is an award-winning regulatory consultancy with over 80 experts across the UK, Germany, and the US. The team delivers innovative, phase-appropriate regulatory strategies for medicinal products and medical devices, supporting development from early stages through post-licensing.

Current Focus

Partnering with pharma, biotech, and medtech companies to advance medicines and devices across Europe, the US, and beyond.

Opportunities

Internships, apprenticeships, work experience, and regulatory affairs roles. Full opportunities available via the careers page.

Eleria

Mission

Female-founded sustainable period care brand making reusable menstrual products accessible, affordable, and convenient.

Science / Technology / Innovation

Eleria's award-winning Cleaning & Sterilising Case was designed using behavioural insights and user-centred research conducted at the University of Bristol. The company combines thoughtful product design and engineering to remove barriers to menstrual cup adoption, especially in shared or public environments.

Current Focus

Scaling menstrual cup adoption, expanding international shipping, building impact partnerships addressing period poverty, and continuously improving products using user feedback.

Opportunities

Collaborations with universities, community groups, and organisations to deliver educational workshops and talks on menstrual health and sustainability. Please reach out to the team at hello@eleria.com

INTER-UNI FEMTECH NETWORKING FAIR

Ellele Health

Mission

Advancing gynaecological diagnostics by improving sampling methods and closing the data gap in women's health.

Science / Technology / Innovation

The Ellele Sampling Device enables superior vaginal sample collection without speculum-based methods. Clinical research underpins the platform, supporting biomarker discovery for endometrial and ovarian cancers while building a robust biobank linked to clinical data.

Current Focus

Launching and running our second Ellele-O2 clinical trial across UK hospitals, recruiting 300 women to identify biomarkers for diagnostic test development.

Opportunities

Collaborations with clinicians, researchers, and industry partners to expand diagnostic innovation in women's health.

Website: <https://ellelehealth.com>

LinkedIn: <https://www.linkedin.com/company/ellele-health>

Genie Fertility

Mission

woignwiognweiognewg

Science / Technology / Innovation

Genie combines machine learning and multi-omics analysis of menstrual blood to unlock molecular biomarkers from the uterine lining — offering a non-invasive diagnostic alternative to painful biopsies and expanding understanding of uterine health for fertility care.

Current Focus

Genie's current priority is advancing its diagnostic platform, including clinical validation of its first non-invasive test for uterine health to support fertility assessment and IVF outcomes. The company collaborates with leading IVF clinics and research partners across the UK and Europe.

Opportunities

Genie Fertility welcomes conversations with students, researchers, and early-career professionals passionate about reproductive health, biotech innovation, AI in diagnostics, and clinical research.

Website: <https://www.geniefertility.com/>

INTER-UNI FEMTECH NETWORKING FAIR

Hesta Health

Mission

Closing the women's health gap by rebuilding healthcare to be compassionate, evidence-based, and designed for long-term impact.

Science / Technology / Innovation

Hesta is a clinician-led healthcare company combining digital health technology with human-centred care. Starting with pregnancy and postnatal health, Hesta integrates expert clinicians, designed digital tools, and agentic AI to deliver proactive, continuous care.

Current Focus

Launching its first postnatal care service, advancing AI-enabled workflows, pursuing Software as a Medical Device certification, and building new digital-physical care models.

Opportunities

Internships and early-career roles across engineering, product, marketing, communications, and clinical teams. Students and graduates take real ownership and ship real work.

Careers: <https://hestahealth.pontahr.com/>

Instagram: <https://www.instagram.com/hestahealth>

Impli

Mission

Closing the hormone data gap in women's health by enabling continuous, real-time hormone monitoring.

Science / Technology / Innovation

Impli is developing an implantable biosensor platform that measures reproductive hormones in interstitial fluid, combined with AI analytics to generate clinically actionable insights. Applications include IVF, PCOS, reproductive disorders, and menopause.

Current Focus

Final R&D stages ahead of first-in-human studies in partnership with Imperial NHS.

Opportunities

Student internships, research collaborations, and investment opportunities.

LinkedIn: <https://www.linkedin.com/company/impli/>

INTER-UNI FEMTECH NETWORKING FAIR

Joii X

Mission

Transforming menstrual health through measurable biological data

Science / Technology / Innovation

Joii combines AI-powered image analysis with specially designed menstrual evaluation pads to quantify menstrual blood loss and clotting. By turning period symptoms into objective, trackable data, Joii supports better health literacy, clinical conversations, and earlier identification of menstrual health issues.

Current Focus

- Scaling adoption of the AI-powered menstrual evaluation app across iOS and Android.
- Expanding distribution of Joii Evaluation Pads online and in retail outlets.

Opportunities

Joii is interested in conversations and collaborations with researchers, clinicians, and students passionate about women's health, AI in healthcare, and medical device innovation.

Website: <https://joiiicare.com/>

Moon Cup

Mission

Delivering safe, sustainable, stigma-free period care — demanding dignity, equality, and better menstrual health for all.

Science / Technology / Innovation

A pioneer in menstrual health since launching the world's first medical-grade silicone menstrual cup in 2002, Mooncup continues to innovate across biobased materials, absorbent textiles, and clinically validated natural alternatives.

Current Focus

Developing alternative superabsorbents, launching a natural-materials maternity pad, and expanding workplace distribution.

Opportunities

Open to passionate individuals aligned with Mooncup's mission across product, sustainability, and advocacy.

Website: <https://wearemooncup.com/>

LinkedIn: <https://www.linkedin.com/company/mooncup-ltd>

Samphire Neuroscience

Mission

Transforming women's health through brain-based, non-hormonal, drug-free innovation.

Science / Technology / Innovation

Samphire develops clinically validated neurostimulation wearables using tDCS technology. Its flagship products, Nettle™ and Lutea™, target neural circuits involved in pain, mood, and focus across the menstrual cycle. These devices are paired with the Samphire App and proprietary CycleSync™ science, grounded in over 30 years of neuroscience research and ongoing clinical studies.

Current Focus

Scaling real-world impact, expanding the digital health ecosystem, and deepening research partnerships and scientific publications.

Opportunities

Internships in engineering, product, and commercial teams; research collaborations; and neuroscience events and talks.
